

Observational and Notational Analysis in Sports

Dr. Gibson Moreira Praça

Universidade Federal de Minas Gerais

Brazil

Personal introduction

UFMG Graduated in Physical Education

UFMG Master in Sports Sciences

UFMG Ph.D in Sports Sciences

CBF Coach Educator

FIFA FIFA Coach Educator

Head of the CECA/UFMG

Agenda

- Basic concepts on Observational Analysis
- Definitions of tactical and technical-related events
- Paying attention to the details!
- Practical example of coding technical-tactical events
- Research on observational analysis in sports

Basic concepts on Observational Analysis

What is an event?

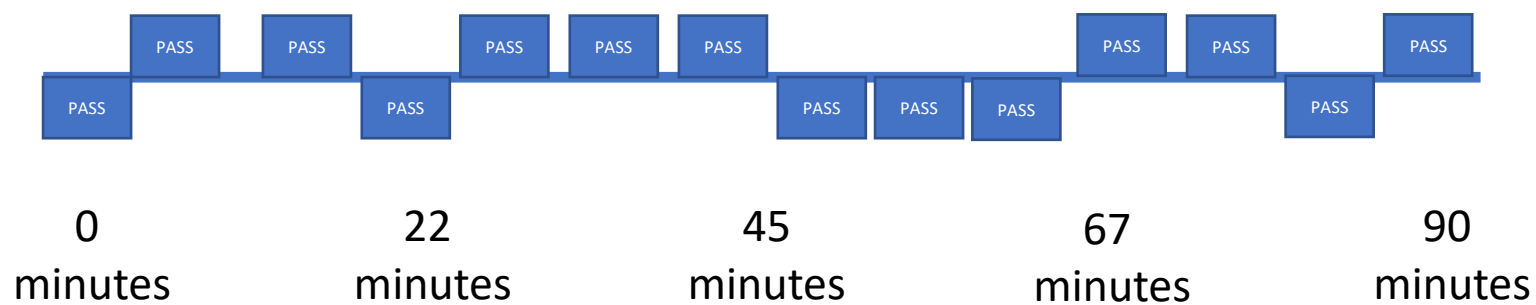

Basic concepts on Observational Analysis

What is a TAG?

Team A

Team B

Basic concepts on Observational Analysis

- Notational analysis is a means of recording events in which there is an objective and precise process to describe what actually happened. In this context, notational analysis allows a reliable record that “does not lie” (of course, if the process of collecting information is reliable and if the observation system allows answering the right questions) (Carling, Williams and Reilly, 2008).

What does notational analysis mean?

Figure 1. Dashboard developed in the LongoMatch Software.

Basic concepts on Observational Analysis

Well played, boys. High passing accuracy!

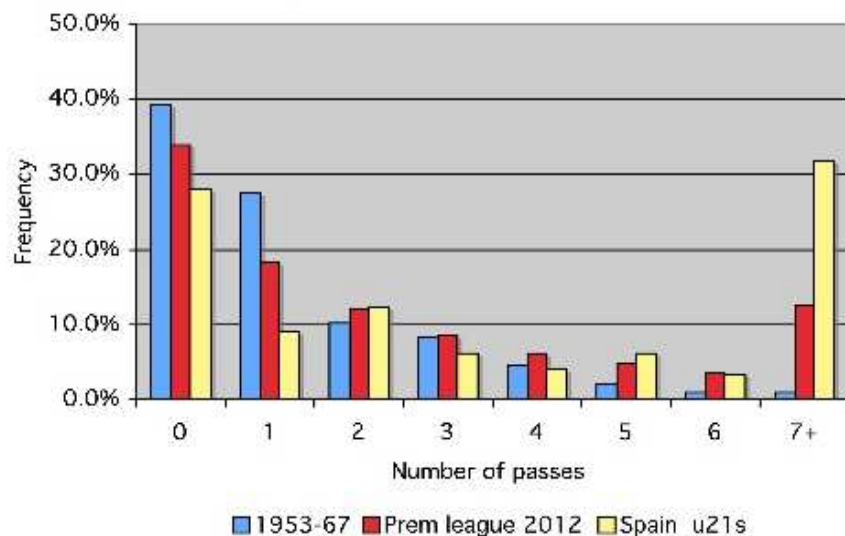

What a bad performance! No one attempted shooting on goal!

“Each individual brings his or her bias to the game and may see it from a partisan viewpoint. Even the best coaches are often unable to recall sequences of events correctly and fail to appreciate where successful plays originated or mistakes began. (Carling, Williams and Reilly, 2008, p.24).”

Basic concepts on Observational Analysis

Number of passes before possession is lost

The distant past?

Charles Reep

*First meaningful analysis of football
1950-1967*

- **90%** of all possessions end in less than 4 passes

The importance of interpreting the data contextually.

Definitions of tactical and technical-related events

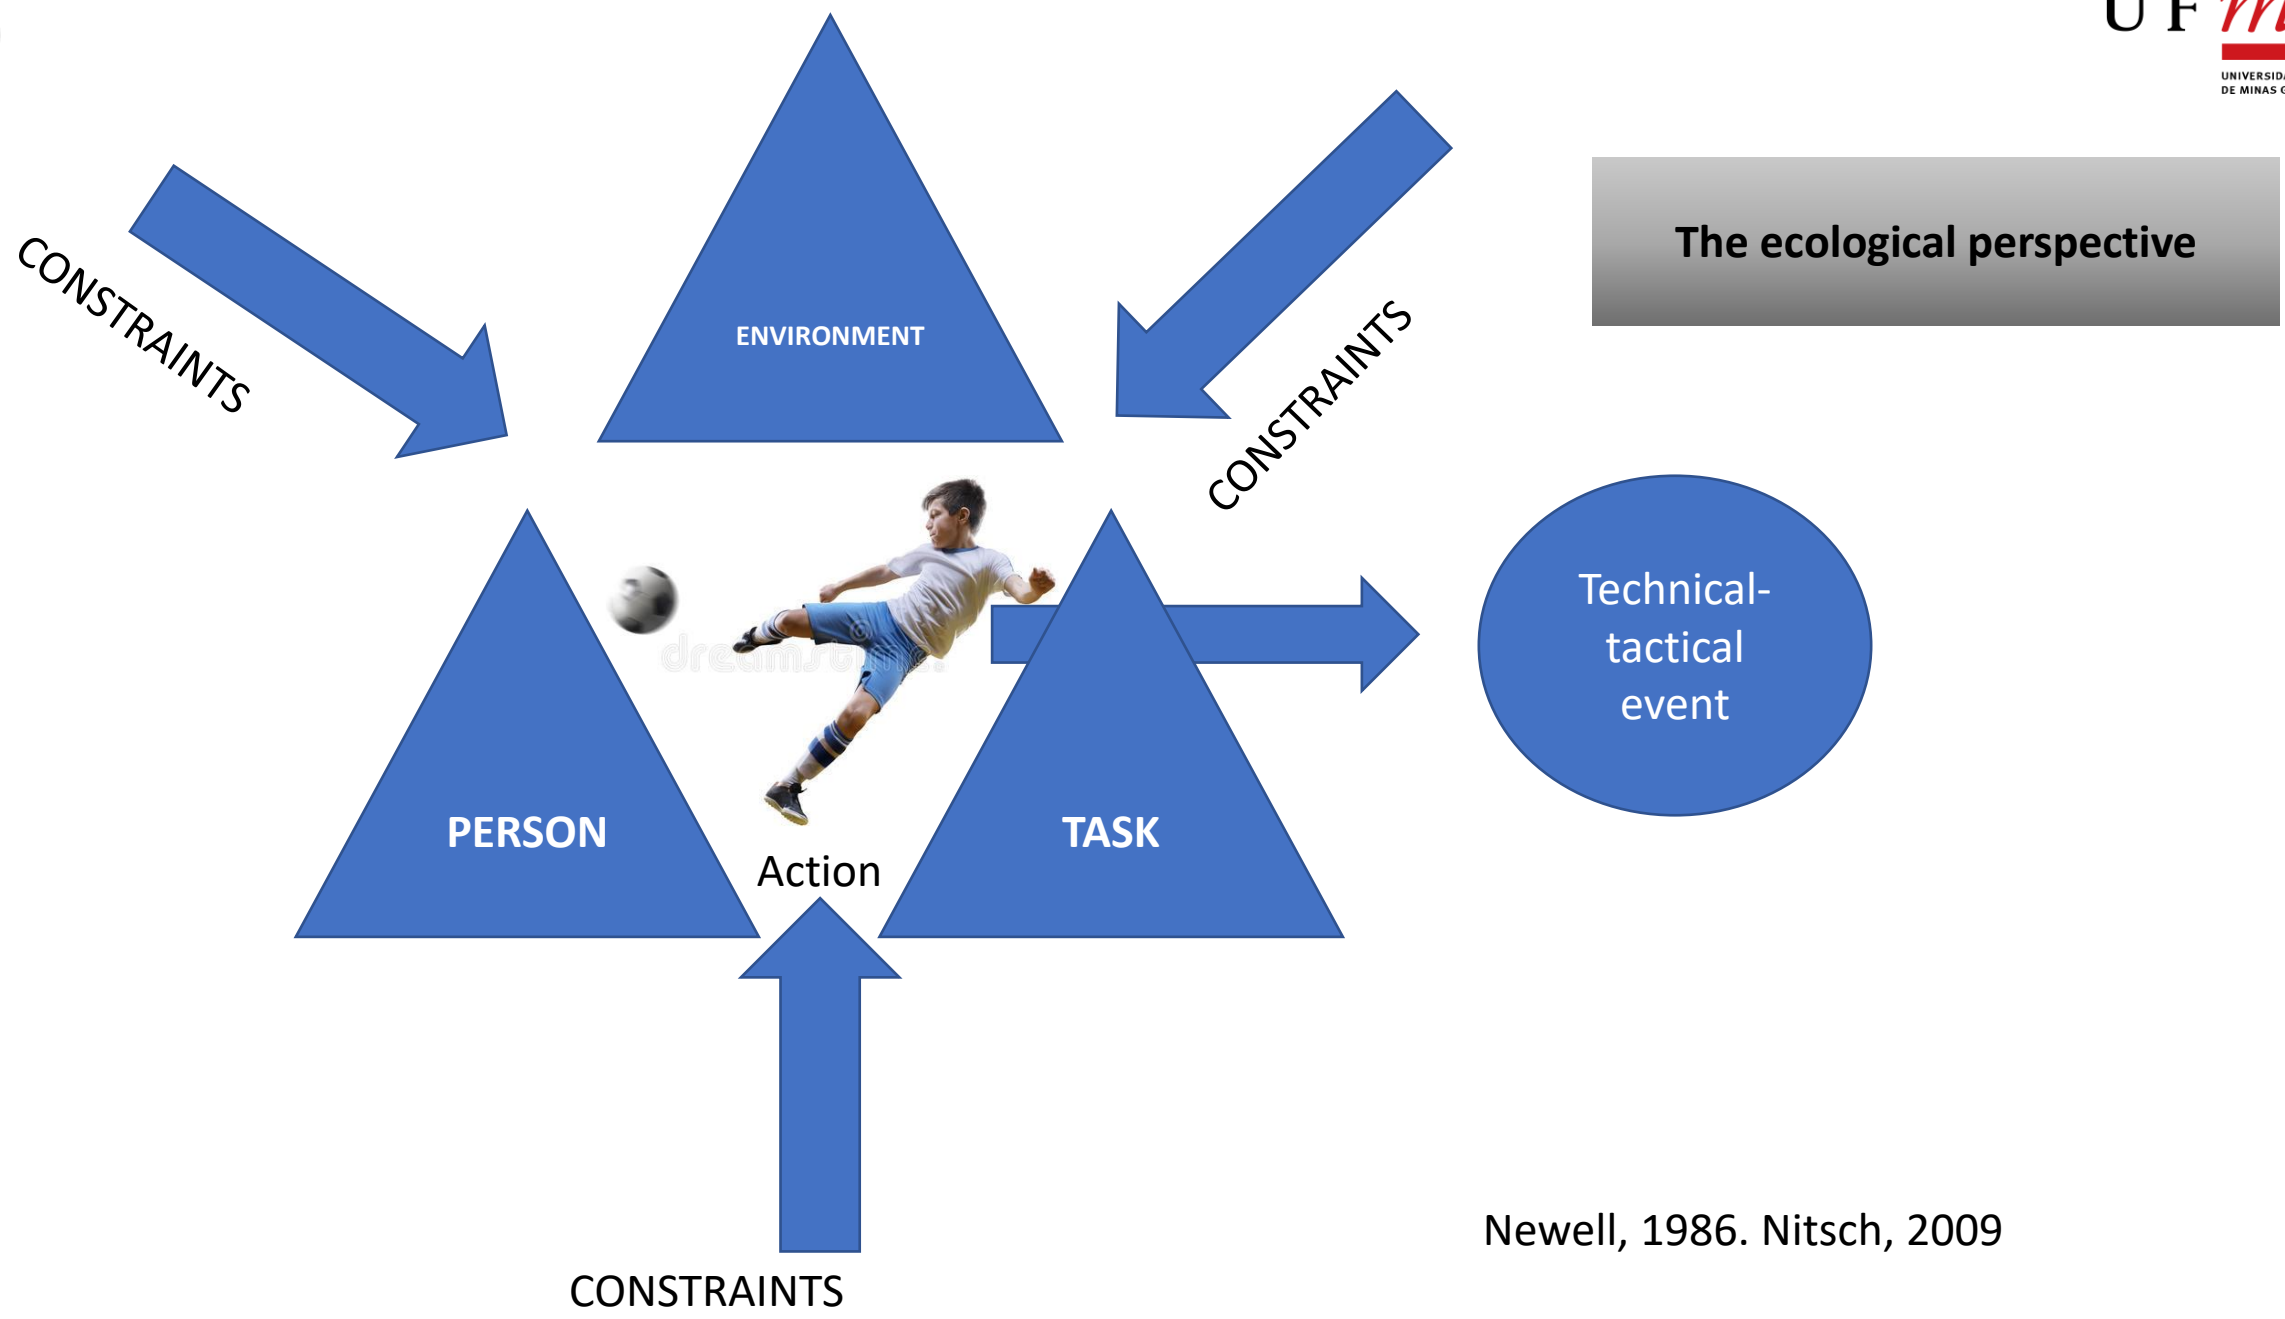

The traditional perspective

Tactical event: the observable decision-making action.

Technical event: the observable motor action.

Newell, 1986. Nitsch, 2009

Paying attention to the details!

Ensuring internal consistency periodically

How able are you in collecting events?

What you consider X today, was the same Yesterday?

| | Moment 1 | Moment 2 | Absolute difference | Difference in % |
|---------|----------|--------------------|---------------------|-----------------|
| Event A | 2 | 3 | 1 | 50% |
| Event B | 2 | 2 | 0 | 0% |
| Event C | 4 | 5 | 1 | 25% |
| Event D | 6 | 8 | 2 | 33% |
| Event E | 7 | 7 | 0 | 0% |
| Event F | 9 | 6 | 3 | 33% |
| | | Average Difference | 1,167 | 24% |

Internal consistency: the consistency between observations made by the same observer, in different moments

Paying attention to the details!

Ensuring external consistency periodically

How able are you in collecting events?

What you consider X today, was the same Yesterday?

| | Observer 1 | Observer 2 | Absolute difference | Difference in % |
|---------|------------|--------------------|---------------------|-----------------|
| Event A | 2 | 3 | 1 | 50% |
| Event B | 2 | 2 | 0 | 0% |
| Event C | 4 | 5 | 1 | 25% |
| Event D | 6 | 8 | 2 | 33% |
| Event E | 7 | 7 | 0 | 0% |
| Event F | 9 | 6 | 3 | 33% |
| | | Average Difference | 1,167 | 24% |

External consistency: the consistency between observations made by two different observers during the same events.

Is this a real problem?

There is a high within and between-session variability in technical-tactical events.

Variability and creativity in small-sided conditioned games among elite soccer players ☆

Simone Caso, John van der Kamp

Technical events

Small-sided games with fewer players induce a higher frequency of creative on-the-ball actions. No creative actions were observed in the formal 11-a-side match.

The observational data support using smaller SSG formats to nurture creativity in soccer players.

Players' match demands according to age and playing position in professional male soccer players

Changjing Zhou ^a, Alberto Lorenzo ^a, Miguel-Ángel Gómez ^a and José M. Palao ^b

^aFacultad de Ciencias de la Actividad Física y del Deporte (INEF), Universidad Politécnica de Madrid, Madrid, Spain; ^bDepartment of Health, Exercise Science and Sport Management, University of Wisconsin-Parkside, Kenosha, WI, USA

Players from those highly physically-demanded positions experience a more prominent age-related drop in performance.

Table 1. Data distribution according to age group and playing position (values expressed in occurrence and percentage).

| Position | Group 1 (17–22.9 yr) | Group 2 (23–28.9 yr) | Group 3 (29–34.9 yr) | Group 4 (35–40.9 yr) | Total |
|--------------------|----------------------|----------------------|----------------------|----------------------|--------|
| Central defender | 516 (9%) | 2,929 (49%) | 2,211 (37%) | 350 (6%) | 6,006 |
| Fullback | 659 (12%) | 3,591 (63%) | 1,337 (24%) | 85 (1%) | 5,672 |
| Central midfielder | 702 (10%) | 3,517 (48%) | 3,022 (41%) | 148 (2%) | 7,389 |
| Wide midfielder | 897 (16%) | 3,476 (63%) | 1,062 (19%) | 72 (1%) | 5,507 |
| Attacker | 262 (7%) | 2,045 (51%) | 1,579 (40%) | 87 (2%) | 3,973 |
| Total | 3,036 (11%) | 15,558 (54%) | 9,211 (32%) | 742 (3%) | 28,547 |

Technical and physical match performance of teams in the 2018 FIFA World Cup: Effects of two different playing styles

Qing Yi^{a,b}, Miguel A. Gómez^b, Lei Wang^{c,d}, Guohu Huang^{c,d}, Hengliang Zhang^{c,d} and Hongyou Liu^{c,d}

^aSchool of Physical Education and Sport Training, Shanghai University of Sport, Shanghai, China; ^bFacultad de Ciencias de la Actividad Física y del Deporte (INEF), Universidad Politécnica de Madrid, Madrid, Spain; ^cSchool of Physical Education & Sports Science, South China Normal University, Guangzhou, China; ^dNational Demonstration Centre for Experimental Sports Science Education, South China Normal University, Guangzhou, China

Possession-play teams achieve more shots, shots on target, passes, and passing accuracy than direct-play teams in the World Cup.

Take Home Message

Ensuring the quality of your observational data is mandatory.

Getting high-quality videos will facilitate the data-gathering process.

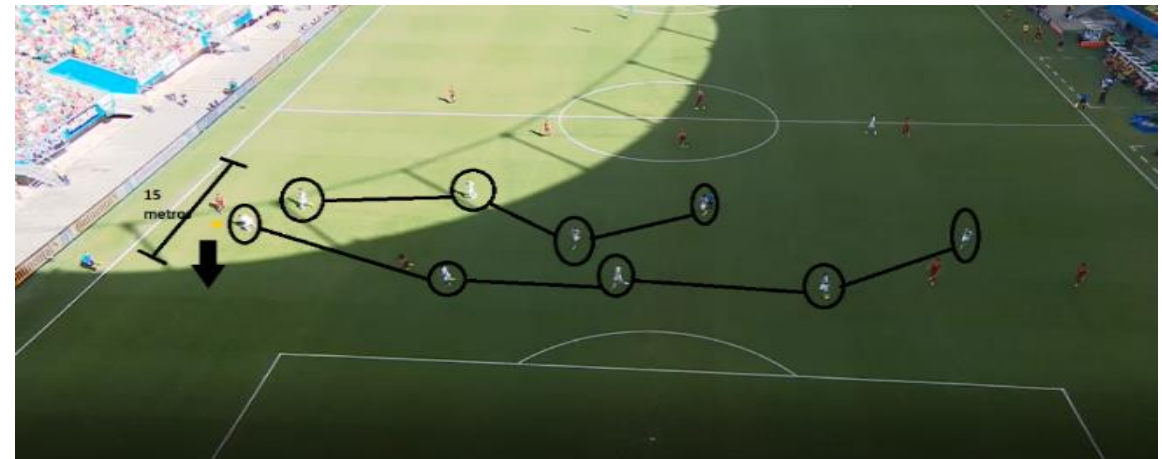

Dealing with tagging software requires practice. Take your time!

More than getting lots of information, asking the right questions will improve the quality of the analysis.

“I’ve never scored a goal in my life without getting a pass from someone else” (Abby Wambach)
